I can make a difference.

“By becoming a Segway PT owner and registering for Renewable Energy Credits, I’ve helped reduce environmental impact while operating my Segway PT. Plus, I’ve joined other Segway PT owners who are helping local utilities rely more on renewable energy. That’s important to me.”

We're a positive force.

“Our city council has been promoting ‘going green’ for years—not just for environmental reasons, but also to help reduce operating costs for our city. Our police force has several Segway PTs in use. If more police departments relied on Segway PTs, the fuel savings would be astronomical.”

Green is good business.

“Our distribution center covers 35 acres. Equipping our warehouse crew and security force with Segway PTs instead of cars and trucks dramatically lowered our maintenance costs. By utilizing Segway’s REC program, we are also supporting renewable sources of energy.”

Apply for Renewable Energy Credits in one simple step:

Go to www.segway.com/green and register. It's quick! It's free! It's that easy! The RECs purchased on your behalf will offset the power you would use in a year to charge your Segway PT, and help support renewable energy sources such as solar, wind, and geothermal power.

Don't just save gas with your Segway® PT. Save the planet.

You already know that Segway PTs can go for miles and miles on just pennies worth of electricity, but now your Segway PT has the potential to be more environmentally friendly than ever. That's because Segway will purchase Renewable Energy Credits (RECs) on your behalf—equivalent to the amount of electricity a frequent rider uses in one year to charge a Segway PT (about 200 kilowatt hours).

If you're thinking that one Segway PT owner can't make a dent, think about joining the other owners who have already signed on!

So don't wait! Flip this brochure over for the simple instructions on how to register.

Together, we can make a world of difference.

Your Segway PT

Multiplied by 200 kilowatt hours in RECs.

Multiplied by as few as 1,000 other Segway PT owners just like you.

What are Renewable Energy Credits?

Renewable Energy Credits (RECs) compel utility companies to purchase power that has been generated by cleaner, renewable sources such as wind, water, or geothermal energy.

How do RECs work?

Utility companies are required by law to buy some of their energy from renewable sources. Every kilowatt hour of electricity they can obtain from a renewable source equates to one less kilowatt hour generated by CO₂ - producing fuel.

Will generate:

200,000 kilowatt hours worth of credits (for every 1,000 Segway PT owners) that utilities can then use to buy power generated by renewable sources, reducing our dependence on fossil fuels.

Will save:

Enough gasoline to fill up the average car 380 times (5,700 gal.) or...

One month of electricity for nearly 200 U.S. citizens or...

56,000 lbs. of coal or...

84,410 gal. of water (to cool a power plant generating 200,000 kilowatt hours of electricity) or...

Enough CO₂ to fill more than 11.5 million soccer balls (345,000 lbs.)
